Assurance Reimbursement Management™

External Edit Return

(Epic CRD/CSV file definition)

Each Epic External Edit Return file contains unreleased claim error information. Use it with the HIS Workflow Assignment feature if you want to include custom workflow codes associated with these claim errors. The files allow you to upload claim error and custom workflow code information to an external system. This document explains the available versions, file output, and set up.

There are six available versions of the file. Four files are pipe-delimited with a .csv file name extension. Two files are available in the Epic proprietary 277 return file with a file name extension of .crd.

Pipe-delimited .CSV files

- **Epic External Edit Return (2250):** Original file excludes any overridden errors as well as all warnings, unless it is a paper claim edit (PEDIT) warning.
- **Epic External Edit Return with Warnings (2251):** Has the same content as the original return file plus standard claim error warnings and overridden errors.
- **Epic External Edit Return II:** Has the same content as the original return file. The difference is the content of the claim transmission type (column Xmitttypedesc). The original file includes a text description while this version includes a numeric code.
- **Epic External Edit Return II with Warnings:** Has the same content as the Epic External Edit Return II file plus standard claim error warnings and overridden errors.

Epic 277 .CRD files

- **Epic External Edit Return (277):** Hncludes the Epic 277 content, excluding any overridden errors or warnings, unless it is a paper claim (PEDIT) warning.
- **Epic External Edit Return with Warnings (277):** Hncludes the Epic 277 content plus standard claim error warnings and overridden errors.

Pipe-delimited file output

```
acctnum|submitdate|fieldname|payername|editname|CHC|totalchgs|000|workflo
wcode| editmsg||xmittypedesc||
```

Item	Description
Acctnum	Patient control number
Submitdate	Claim creation date
Fieldname	Claim field name that has an error
Payername	Active claim payer
Editname	Assurance edit that triggered the error

© 2025 Optum, Inc. and/or one of its subsidiaries. All rights reserved.

Item	Description
CHC	Hard-coded value
Totalchgs	Reports the total claim charges
000	Hard-coded value
Workflowcode	Custom workflow code assigned to the edit (optional)
Editmsg	Message that explains the claim error [empty] This item is intentionally empty.
Xmittypedesc	This is the claim transmission type value. • Epic CRD or Epic CRD with Warnings: **Electronic**, **Direct Entry**, **Local Print**, or **CLS Print** • Epic CRD II or Epic CRD II with Warnings: **1, 2** 1 = Electronic or Direct Entry claims 2 = Local Print and CLS Print claims
[empty]	This item is intentionally empty.

File setup

For either the pipe-delimited or proprietary 277 file output, set up an auto module and auto list to run the reports. The module requires the appropriate process that matches the file name. For example, use the **Epic External Edit Return** process for the **Epic External Edit Return** report. All processes are listed within the **Reports-Miscellaneous** group.

Each auto module process requires a saved claim filter that targets unreleased claims. The **Workflow Code Set** module field is optional. Select a code set if you want to include custom codes configured through the HIS Workflow Assignment feature.

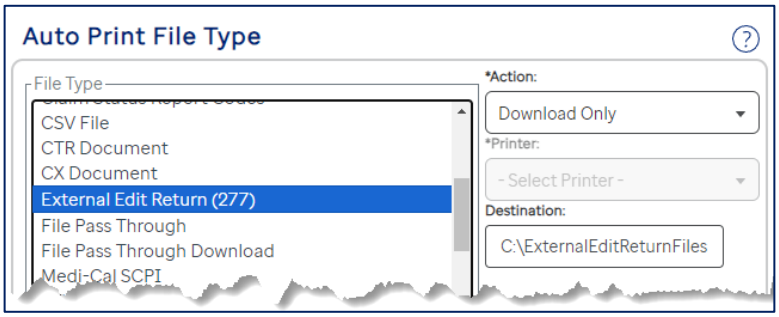

Tip: If you add the module to an auto list with a "Claims Bridged With Key …" trigger event, then the External Edit Return file only includes error data from claims within the targeted submission file that also meet the filter criteria.

The .CSV files are always pipe-delimited, regardless of any set global CSV options for reports. The auto module does not allow any user to override the delimiter.

File access

Access the files through View Reports or set up the file to automatically download to a local system. To download or print the .CRD files using Auto Agent, set up the External Edit Return (277) file type through Maintenance > Auto Print> File Type:
