1224/1424 – Claim Changes History - All Report

Warning! This is a very large report – Conservative estimate is six pages per claim.

The Claim Changes History – All Report contains all changes to all fields in all claims in the working group. If a field was changed multiple times, each change is included on this report. The last change shows the current contents of the field. Use this report to document exactly who did what to a claim.

NOTE: The Claim Changes reports can be slow. To make the report generation as efficient as possible, fine-tune your claim list until it contains only those claims for which you need change information. If you request the report on too many claims, your report will timeout before it is created. Please limit the number of claims in the report request.

- This report is available for both unreleased claims (1224) and released claims (1424).
- Each claim begins with an identification line and is followed by the change history for each changed field on the claim. The history includes the following (in order of columns presented):
  (a) date of change, (b) time of change, (c) name of user or process that made the change,
  (d) what was bridged in, (e) what was done to the data, (f) the data itself.
- If data on the line that contains ORIGINAL is empty, the field was originally empty.
