1221/1421 – Claim Changes History Report

The Claim Changes History Report contains all changes to monitored fields in all claims in the working group. This report can be a very large report. If a monitored field was changed multiple times, each change in the history is included on this report. The last change shows the current contents of the field.

NOTE: The Claim Changes reports can be slow. To make the report generation as efficient as possible, fine-tune your claim list until it contains only those claims for which you need change information. If you request the report on too many claims, your report will timeout before it is created. Please limit the number of claims in the report request.

- This report is available for both unreleased claims (1221) and released claims (1421).
- Each claim begins with an identification line and is followed by the change history for each changed field on the claim. The history includes the following (in order of columns presented):
  (a) date of change, (b) time of change, (c) name of user or process that made the change,
  (d) what was bridged in, (e) what was done to the data, (f) the data itself.
- If data on the line that contains ORIGINAL is empty, the field was originally empty.
- This product records every change to every field. Changes on this report are changes to fields that you have set up as monitored fields in *Claim Changes* on the *Maintenance, System Administration* menu. If you have not set any monitored fields, the report will always be empty.
- You can monitor changes to any fields except the fields on the History or Payer Activity tabs.
- Because each claim can potentially contain a large number of service lines, and because the report will reflect changes to the field in every service line, we recommend that you do not monitor changes on service line field unless it is absolutely necessary.
