1101 – Submission Summary Report

This report provides count and amount totals of claims in the selected claim submission file.

- **FILENAME** is the name the file was given on your HIS system.
- **REJECTED HELD CLAIMS** are clean claims that are being artificially held by the presence of a Hold Code, Hold Note, or a holding value in Release Status. When the hold is removed from these claims, they will validate to accepted.
- **DISCARDED CLAIMS** are claims that your rules threw out before they were saved into the database.
- **CLAIMS FOR STATE REPORTING ONLY** contains a count of claims submitted solely for the purpose of fulfilling mandatory agency reporting requirements. These claims are submitted through either the State Data Reporting (SDR) feature or the Regulatory Reporting Tool (RRT) within the product. These claims are outside your normal claim-to-payer workflow. The system ignores these claims when calculating the acceptance rate in the last line of the report. NOTE: This line does not include RRT claims created as copies of any bridged primary payer claims. For this count, see the CLAIMS COPIED FOR STATE REPORTING line in this report.
- **DOWNLOAD CLAIMS** is the total number of claims in the submission file.
- **SPLITTING CLAIMS** are claims that were created and saved into the database by your rules for splitting an inbound claim into two claims. Claims created by splitting will increase your count of claims.
- **ACCEPTANCE RATE (EXCLUDING HELD)** The rate of initial acceptance when the *Rejected Held Claims* are removed from the calculation. This figure shows the percentage of submitted claims that contain no data errors.
- **CLAIMS COPIED FOR STATE REPORTING** is the total number of your RRT claims created in the product as copies of your primary payer claims that were bridged and not discarded. If you do not use RRT or if you only bridge special files to create RRT claims, then this count is always zero.
