1810 – 72-Hour Rule Report

The 72-Hour Rule report shows all claims that may violate the configured 72-hour Rule checking. Use this report to locate the claims that may be in violation and review them for compliance. This report includes all overlapping claims identified by the 72-Hour Rule checks, even if you configure the errors to display only on inpatient claims or only on outpatient claims. Follow your business procedures for correcting any issues revealed by the compliance check.

Note: the 72-Hour rule check can be configured to check 1500 claims of selected facilities. It can also be configured to cover other time periods and other LOBs. Configuration is done in *Maintenance, System Administration, 72-Hour Rule*. If other criteria are set for non-Medicare LOBs, this will be a mixed report that shows all claims that may violate any of the settings.

- **CID –** The CID of the owner of the claim. Claims belonging to other CIDs contain only enough data to find the claim on the other client: CID, Patient Control Number, Patient Name, Statement Dates, and LOB. The other columns are empty
  (In this sample the last claim belongs to another CID, 9999.)
- If the report contains multiple CIDs, this message will display at the beginning of the claims list:
  ** *Claims belonging to other CIDS contain only enough data to identify the claims: CID, Patient Control Number, Patient Name, Statement dates, and LOB. Other columns are empty.*
